INTERSLAT LINE A PRODUCT OF THE **ROBOTECNICS** COMPANY

THE O.L.D.A. CONCEPT

In packing lines the loose products are being conveyed between dedicated machines.

Whenever there is a disruption of the flow, the products have to be accumulated to allow the leading machine to produce at maximum output.

The **O.L.D.A.** system enables normal direct conveying, and only in case of disruption, the products are diverted to dynamic accumulation.

The **O.L.D.A.** system can be applied to different line configurations of rows, directions and layout, with the advantage of being activated only when required.
